

IMPORTANT! – INSTRUCTIONS: PLEASE READ

Thank you for your purchase of the Pocket Jack™ for Carvin', a multiple-blade jackknife designed specifically for woodcarvers. We put great effort into manufacturing innovative, quality carving tools designed to give you a lifetime of enjoyment. Our reputation for long-lasting, razor-sharp edges is well known throughout the world. The information contained in this manual is designed to provide you with the basic knowledge for operating the different blades contained in your new knife. We also provide routine maintenance tips. Reading over this material will ensure that you know how to keep your knife in top working order. Performing this maintenance will keep the blades working at their maximum efficiency. More detailed information can be found at your authorized Flexcut dealer, flexcut.com or local library.

Operating the locking device

Always use great caution when opening or closing any blade in the knife. **They are extremely sharp!** After making your blade choice, use the embossed nail nick to pull it out until the blade locks into place. **Note: The V-scorp does not have a nail nick, and can be pulled out by inserting your nail under the shank of the tool itself.** If any of the adjacent blades rotate out along with the blade you wish to use, push them back into the handle. The blade will only lock in place if the others are completely closed. For added safety, test the blade to ensure it is securely locked into position.

To unlock and close the blade into the handle, push down on the thumb recess on the back of the knife. When the blade releases, fold the blade completely back into the handle until its edge is safely covered. **While the lock is depressed, be careful not to push the blades that are already closed any deeper into the handle.** This can jam the locking mechanism.

Maintenance

The Pocket Jack™ for Carvin' blades are made from high-carbon steel to offer the best possible edge for carving wood. The black oxide finish is added to make the blades rust-resistant, not rustproof. Keeping the knife in a dry environment will help prevent spotting of rust. Wiping the blades with a thin coat of oil or wax can also be very good preventive maintenance.

Your new knife has been oiled prior to packaging to help ensure movement when selecting, opening and closing any of the blades. Flexcut recommends oiling the pivot point of the blade with one drop of a 3-in-1 oil. This lubricates the blade to facilitate an easier operation of the action of the blades in your knife.

Always avoid prying with any blade. Push the tool through the entire cut. Prying can damage the blade and void the warranty.

Flexcut Limited Lifetime Warranty

We warrant products manufactured by Flexcut Tool Company, Inc. to be free of defects in material and workmanship for the life of the owner. We will replace the tool/knife with a new Flexcut carving tool/knife at our expense and we will also reimburse the shipping cost or postage and pay the return freight. If you feel any Flexcut tool has failed due to a manufacturing defect, mail the tool along with a written explanation of the problem to the address below. Please include your name, address, email address (if available) and a daytime telephone number along with your tool/knife.

Flexcut Tool Company, Inc.
Attn: Tool Return
